FOR IMMEDIATE RELEASE

## **NEW OPERATING ROOM TECHNOLOGY ALLOWS EYE SURGEONS TO CORRECT ASTIGMATISM MORE ACCURATELY**

Largo, Florida April 22, 2009 – Especially challenging to ophthalmologist is the correction of astigmatism. Current methods of astigmatism correction can now be replaced by the accuracy of newer technology that provides real-time information for more predictable results before the patient leaves the operating table.

With the new Wavefront-guided cataract surgery, Dr. Robert Weinstock is able to correct astigmatism at the same time as cataract surgery. He says, “The new ORange™ intraoperative wavefront aberrometer helps guide my decisions about lens positioning, strength, and visual acuity for astigmatism correction with real-time analysis during surgery. Patients appreciate the results.”

Dr. Robert Weinstock, Dr. Neel Desai and Dr. Stephen Weinstock are the only ophthalmologists in Florida using this new precision equipment and are the first of five surgeons worldwide to operate with it. They are the Cataract Specialists of The Eye Institute of West Florida, established in Pinellas County in 1974, specializing in advanced cataract procedures.

###

To learn more about correcting astigmatism and the world's first intraoperative wavefront aberrometer, please contact David Jeffery at (727) 488-7122, [david.jeffery@eyeinstituteofwestflorida.com](mailto:david.jeffery@eyeinstituteofwestflorida.com) or visit <http://www.wavetecvision.com> for more information about this real-time technology.
